How to run this program on your computer

Step 1:

Install mysql server 5.5 ,at the time of creating instance

Write

 Username :root

Password :root

Run **mysql 5.5 command line client**

Write this query to create database:

Create database CarRentalSystem;

Now go to Mysql server installation files usually in the directoy
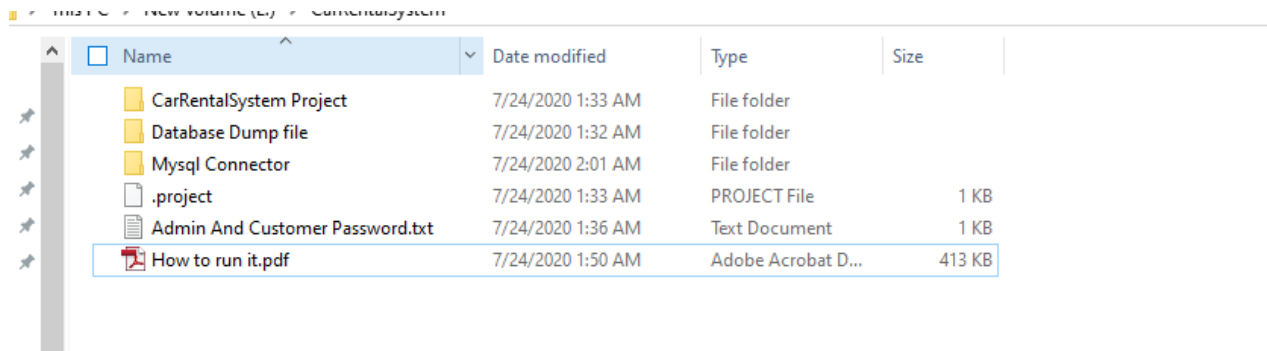

C:\Program Files (x86)\MySQL\MySQL Server 5.5\bin

Open command prompt (cmd) on this given directory and type mysql –u –p database we just created < (path of the dump database)
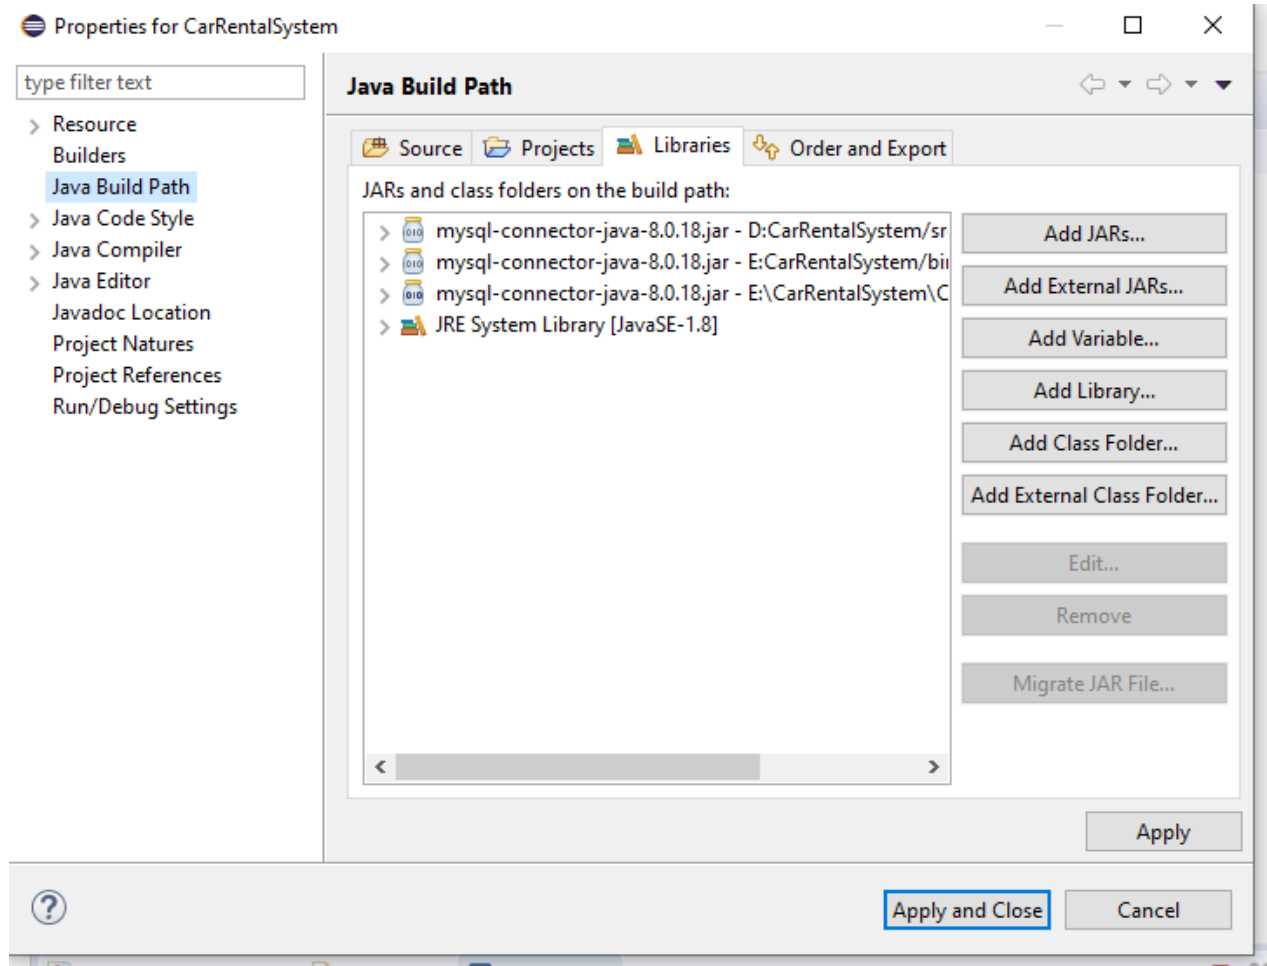

mysql –u –p CarRentalSystem < E:\CarRentalSystem\Database Dump file\CarRentalSystemDatabase.sql

Step 2:

Open eclipse and go to Open Project from file System select this folder
(highlighted one)

Right click on CarRentalSystem Project in eclipse go to properties and
select libraries Add External Jars browse to mysql connector given in the
folder .

Now you are able to run the program although it will show two errors of not finding the mysql connector(but it is already added) click on proceed now you can check the application.
